

ARILON WORKS FOR INDUSTRY PROFESSIONALS. FIND OUT WHY.

Ants and cockroaches can be difficult to find and control, resulting in multiple callbacks. Arilon® insecticide from Syngenta Professional Pest Management controls ants, cockroaches and other elusive pests no matter where they lurk. Take it from these industry professionals who choose Arilon to help ensure their customers can carry on without the worry and threat of these nuisance insects.

Reduces Callbacks, Even in Tough Situations

Mr. Phil Hadley: Owner, Collier Pest Control, Naples, FL

“We’re having great success using Arilon on our worst cockroach infestations, in conjunction with Advion® cockroach gel bait and arenas. We typically get these extreme situations under control within two weeks, taking care of American, Australian, German and other cockroach species. Our callbacks have been drastically reduced.

“We also use Arilon to control white-footed, big-headed, ghost and crazy ants.

We use Arilon everywhere that pests are entering – entryways, windows, thresholds, plumbing inlets, soffits and eaves.

The convenience of the Arilon packaging is a plus. We take a bag of packs into the truck and mix them up right there on site for our backpacks. It’s premeasured, so there’s less product waste, and we avoid excess concentration in the truck.”

Flexible Label Means Fast Results

Nick Lupini: President, Loyal Termite and Pest Control Co., Inc., Richmond, VA

“We use Arilon for a lot of different pests, including cockroaches and ants. We really like the flexibility of the label. It doesn’t fall under the new regulations, which is great. We can apply it up to 10 feet away and right up to the house. We treat a lot of apartments, can get behind cabinets and have an immediate impact. We don’t have to wait for the insects to get to a bait.

“Many of the products we used before Arilon had more restrictions on the label. And they just weren’t getting the job done. We all want fewer callbacks to reduce the cost. We want to treat it once and be done. We noticed a big difference in the reduction of callbacks with Arilon. In our experience, it controls most labeled pests within 24 hours.

“A lot of products only work well on one surface. We find that Arilon works well on a lot of surfaces, such as concrete, wood, tile, even brick, without any staining. The fact that we can use it on so many surfaces makes life easier.”

Excellent 60 Day Control of Odorous House Ants and Pavement Ants

Dini Miller: Ph.D. Associate Professor, Virginia Tech; Urban Pest Management Specialist, VA

“We’ve tested Arilon on very challenging ant populations in Virginia and are very impressed with how well it performed through 60 days. At the lowest concentration of 0.05%, Arilon provided excellent control of both odorous house and pavement ants within 60 days. In my opinion, Arilon is differentiated in the perimeter product category because of its impressive performance and toxicity profile.”

Delivering Results for Extreme Infestations

Dr. Dan Suiter: Associate Professor of Entomology, University of Georgia, GA

“I’ve been very impressed with how Arilon has performed in some extreme, real-world cases of Argentine ant infestations. Midsummer in Georgia is the toughest time to get control of peak populations of Argentine ants. Even when infestations were at their worst – double the ant populations of other homes we treated – Arilon at the 0.1% use rate still outperformed the competition in my experience. The long-term control of Arilon will make a real difference to the success of PMPs who know that time is money.”

Longer Residual Control Combined With Non-Repellent Action

Rick Ellis: Founder, R&D Pest Services Inc., San Diego, CA

“We’ve been using Arilon as our primary preventive tool since 2010. We were originally attracted by the favorable environmental profile of Arilon, since it can distinguish between target insects and non-target insects, and its non-repellency, and have stayed with it because it has proven to be extremely effective.

“We run three large (\$15K+ per month) routes from our San Diego office. We ran a comparison between the summers of 2010 and 2011. The number of callbacks in July and August 2011 decreased by about 10 percent versus the same period in 2010, even though our customer base had increased. So the rate dropped even more than that.”

The broad portfolio of Syngenta products speaks to its proven track record of success. Researchers and Pest Management Professionals (PMPs) have experienced this success firsthand by using Arilon to provide a pest-free environment, whether in a lab or on a customer’s property.
