

## A powerful tool for broad-spectrum ant control

Advion® Ant bait arena from Syngenta is an innovative technology that can be used in many sensitive situations for outstanding ant control. Arenas should be placed in areas where ants are currently foraging, or where foraging activity is suspected.

### Features and benefits

- Its MetaActive™ effect targets most pest species of ants, including all key sweet feeders
- Features a highly attractive, homogenous formulation
- *Indoxacarb*, its active ingredient, is the only member of its class of chemistry, so it performs like no other insecticide

### Placement tips

#### Indoor use

- Thoroughly inspect infested area to determine proper placement of Advion Ant bait arena.
- Placement of one to four arenas where ants are observed is adequate to control normal ant infestations. Heavy infestations, infestations that are difficult to access or heavier infestations in larger areas may require application of additional arenas.
- Advion Ant bait arena may be placed on vertical surfaces by using an adhesive on the bottom of the station.
- In addition to being placed directly along foraging trails, place Advion Ant bait arena along walls, under appliances or industrial equipment, inside garbage containers, inside cabinets, under furniture or in any locations where there is ant activity or ants can potentially gain entry into a building or structure.
- Do not place arenas on food preparation surfaces.
- Inspect the arenas periodically and replace as needed, or every two to three months.

#### Outdoor use

- Thoroughly inspect infested area to determine proper Advion Ant bait arena placement. Pay close attention to areas where ants may gain access to a building or structure.
- Apply Advion Ant bait arena on or near building/structure exterior areas where ants are actively foraging, such as near tree bases, along exterior walls, around garbage-collection areas, utility accesses, windows, vents or along the ground next to structures.
- Advion Ant bait arena may be placed on vertical surfaces by using an adhesive on the bottom of the station.
- Placement of one to four arenas where ants are observed is adequate to control normal ant infestations. Heavy infestations, infestations that are difficult to access or heavier infestations in larger areas may require application of additional arenas.
- Inspect the arenas periodically and replace as needed, or every two to three months.
